Rotation
Calculation of the contribution of freely rotating groups to electron scattering by gases, J. Karle—155

Solutions (see also **Liquids**)
Birefringence of polyisobutylene in solution and the Frenkel theory of macromolecular rupture, John Rehner, Jr.—450(L)
Conductance of aqueous solutions of calcium chloride at temperatures from 15° to 45°C, G. C. Benson and A. R. Gordon—470
Conduction process in dilute metal-ammonia solutions, Richard A. Ogg, Jr.—533(L)
Deswelling of gels by high polymer solutions, R. F. Boyer—363
Effect of thorium chloride on the potential at the interface between vitreous silica and solutions of potassium chloride, Lloyd A. Wood—429
Electrodeposition of element 43 and the standard potential of the reaction Ma-MaO_4^-, John F. Flagg and William E. Bleidner—269
Free volume and entropy in condensed systems. III. Entropy in binary liquid mixtures; partial molal entropy in dilute solutions; Structure and thermodynamics in aqueous electrolytes, Henry S. Frank and Marjorie W. Evans—507
Fluorescence of diethyl pseudo-isocyanine chloride in solution, E. Hirschlaff Hutten and Peter Pringsheim —121
Fluorescence of naphthacene in anthracene, E. J. Bowan —306(L)
Inversion of low angle scattering data for particle size distribution, S. H. Bauer—450(L)
Ion-migration phenomena observed with the electron microscope, Helmut Thielsch—249(L)

Measurement of potentials at the interface between vitreous silica and solutions of potassium chloride by the streaming potential method, Grinnell Jones and Lloyd A. Wood—106
Multiple adsorption from solutions, John E. Walter—229
On the fluorescence spectra of naphthacene in solid solution of anthracene for different exciting wavelengths, S. C. Ganguly—128
Reinvestigation of the conductance of aqueous solutions of potassium chloride, sodium chloride, and potassium bromide at temperatures from 15° to 45°C, G. C. Benson and A. R. Gordon—473
Solute type and viscosity of dilute solutions of high polymers, Rudolph Speiser and R. T. Whittenberger —349(L)
Statistical thermodynamics of high-polymer solutions. I. Theory for dilute solutions, Turner Alfrey and Paul Doty—77
Statistical thermodynamics of multicomponent systems, William G. McMillan, Jr. and Joseph E. Mayer—276
Structure of soap micelles as indicated by x-rays and interpreted by the theory of molecular orientation. II. The solubilization of hydrocarbons and other oils in aqueous soap solutions, William D. Harkins, Richard W. Mattoon, Myron L. Corrin, and Richard S. Stearns —534(L)
Thermodynamics of dilute solutions of high polymers, Paul J. Flory—453
Thermodynamics of high-polymer solutions: I. The free energy of mixing of solvents and polymers of heterogeneous distribution, Robert L. Scott and Michael Magat—172
Thermodynamics of high-polymer solutions: II. The solubility and fractionation of a polymer of heterogeneous distribution, Robert L. Scott—178
Variation of the transference numbers of calcium chloride in aqueous solution with temperature. III, A. G. Keenan, H. G. McLeod, and A. R. Gordon—466
X-ray diffraction study of micelle structure in potassium laurate solution, E. W. Hughes, W. M. Sawyer, and J. R. Vinograd—131(L)

Spectra (see **Absorption Spectra, Fluorescence, Raman Spectra**)

Statistical Mechanics (see **Mechanics, Statistical**)

Surface Phenomena

Amphipathic character of proteins and certain lyophile colloids as indicated by absorption spectra of dyes, S. E. Sheppard and A. L. Geddes—63
First-order change which involves the vaporization in two dimensions of *N*-heptane on the surface of silver, George Jura, E. H. Loeser, P. R. Basford, and William D. Harkins—535(L)
Measurement of potentials at the interface between vitreous silica and solutions of potassium chloride by the streaming potential method, Grinnel Jones and Lloyd A. Wood—106
Multiple adsorption from solutions, John E. Walter—229
On the possibility of estimating the average surface area of solid particles, Hans M. Cassel—249(L)
Rate-dependent chromatographic adsorption, John E. Walter—332
Structure of soap micelles as indicated by x-rays and interpreted by the theory of molecular orientation. II. The solubilization of hydrocarbons and other oils in aqueous soap solutions, William D. Harkins, Richard W. Mattoon, Myron L. Corrin, and Richard S. Stearns —534(L)
Absolute method for the determination of the area of a fine crystalline powder, William D. Harkins and George Jura—449(L)
Adsorption of gelatin to silver bromide, S. E. Sheppard, R. H. Lambert, and D. Swinehart—372
Deswelling of gels by high polymer solutions, R. F. Boyer—363
Effect of thorium chloride on the potential at the interface between vitreous silica and solutions of potassium chloride, Lloyd A. Wood—429
General theory of the reaction loci in emulsion polymerization, William D. Harkins—381(L)
Some observations on the theory of contact angles, Harold M. Scholberg and W. W. Wetzel—448(L)

Thermodynamic Properties

Effect of pressure on the melting of crystalline rubber, Lawrence A. Wood, Norman Bekkedahl, and Ralph E. Gibson—475
Electrodeposition of element 43 and the standard potential of the reaction Ma-MaO_4^-, John F. Flagg and William E. Bleidner—269
Free volume and entropy in condensed systems. I. Fluctuation entropy and free volume in some monatomic crystals, Henry S. Frank—478
Free volume and entropy in condensed systems. II. Entropy of vaporization in liquids and the pictorial theory of the liquid state, Henry S. Frank—492
Free volume and entropy in condensed systems. III. Entropy in binary liquid mixtures; partial molal entropy in dilute solutions; structure and thermodynamics in aqueous electrolytes, Henry S. Frank and Marjorie W. Evans—507
Deviations from stoichiometric proportions in cuprous iodide, Robert J. Mauer—321
Heat content of manganese at high temperature, B. F. Naylor—329
Low temperature specific heats of α-manganese and γ-manganese, C. Howard Shomate—326
Of ethylbenzene vapor from 300° to 1500°K, F. G. Brickwedde, M. Moskow, and R. B. Scott—547
Potentiometric determinations of H-ion concentration in hydrocarbon oils, Andrew Gemant—146
Rise of temperature on fast stretching of butyl rubber, S. L. Dart and Eugene Guth—28
Thermal expansion and compressibility of a three-dimensional system of harmonic oscillators, F. A. Matsen and John E. Walkey—135
Thermodynamics of dilute solutions of high polymers, Paul J. Flory—453
Thermodynamics of linearly associated systems, A. V. Tobolsky and P. J. Blatz—379

Thermodynamics

Principle of corresponding states, E. A. Guggenheim—253

Thermodynamics of high-polymer solutions: I. The free energy of mixing of solvents and polymers of heterogeneous distribution, Robert L. Scott and Michael Magat—172

Thermodynamics of high-polymer solutions: II. The solubility and fractionation of a polymer of heterogeneous distribution, Robert L. Scott—178

Transference Numbers

Variation of the transference numbers for calcium chloride in aqueous solution with temperature. III, A. G. Keenan, H. G. McLeod, and A. R. Gordon—466

Valence (see also **Mechanics, Quantum**)

Constitutional difference between α- and β-derivatives of naphthalene, J. A. A. Ketelaar and G. W. van Oosterhout—448(L)

Molecular constants and chemical theories, G. W. Wheland—239

Molecular constants and chemical theories, W. F. Luder—349(L)

Remark to Dr. Whelands' article, R. Samuel—251(L)

Simple classical model treatment of the chemical bond, Melvin A. Cook—262

Viscosity

Influence of molecular flexibility on the intrinsic viscosity, sedimentation, and diffusion of high polymers, Robert Simha—188

Influence of velocity gradient on the relation between viscosity and concentration in cuprammonium solutions of cellulose, W. James Lyons—43

Solute type and viscosity of dilute solutions of high polymers, Rudolph Speiser and R. T. Whittenberger—349(L)

Systems manifesting superposed elastic and viscous behavior, A. V. Tobolsky and R. D. Andrews—3

X-Ray Diffraction

Comparison of the structures of stretched linear polymers, Maurice L. Huggins—37

Molecular weight comparisons from density and x-ray data. The atomic weights of calcium and fluorine, Dwight A. Hutchison—383

Structure of liquid argon, Louis H. Lund—317

Structure of soap micelles as indicated by x-rays and interpreted by the theory of molecular orientation. II. The solubilization of hydrocarbons and other oils in aqueous soap solutions, William D. Harkins, Richard W. Mattoon, Myron L. Corrin, and Richard S. Stearns—534(L)

X-ray diffraction study of micelle structure in potassium laurate solution, E. W. Hughes, W. M. Sawyer, and J. R. Vinograd—131(L)
